"Chagas Disease Control: Can We Meet the Goals of the London Declaration on Neglected Tropical Diseases?"

Eric Dumonteil, Ph.D.
Universidad Autonoma de Yucatan

Chagas disease control is still quite limited. In this seminar, Dr. Dumonteil will review some of his lab's efforts to better understand disease ecology and epidemiology as well as their progress toward developing new tools for Chagas prevention and control.

Dr. Eric Dumonteil is primarily interested in the development of new control tools for Chagas disease and other neglected tropical diseases through interdisciplinary research. This includes research of novel vector control strategies, epidemiological surveys, and pre-clinical studies of new drugs and vaccines.
