"Shigella LPS-invasin complex as an adjuvant for nasal HIV vaccines"

Pam Kozlowski, PhD

Associate Professor in Microbiology, Immunology and Parasitology  
LSU Health Sciences Center

Dr. Kozlowski will discuss results of a study using Rhesus macaques to test Shigella LPS for the ability to enhance mucosal and systemic antibody responses to SIV following nasal co-administration with an SIV envelope protein plus DNA that encodes virus-like particles.

Dr. Kozlowski is a mucosal immunologist who has been active in the HIV vaccine development field for many years. Her primary research interests are the development of mucosal vaccines for HIV and the role of IgA in preventing HIV transmission or infection.
